

WATER METERING

## JS IMPERO

**DN50, DN65, DN80 & DN100  
SINGLE-JET VANE-WHEEL  
DRY WATER METER**

Impero is a single-jet vane-wheel dry water meter for precise measurement of large water consumption levels. The advanced engineering design ensures a high dynamic response to metering conditions and a high resistance to strong magnetic fields. The Impero standard version comes pre-equipped for RF, pulse and Mbus modules. It may also be equipped with a reed relay (NK) or optoelectronic (NO) pulse transmitter.

The water meter has been designed and manufactured to meet the MID (Measuring Instruments Directive) and in compliance with EN 14154, OIML R49 and ISO 4054 for the R315 measurement range (formerly Class C).

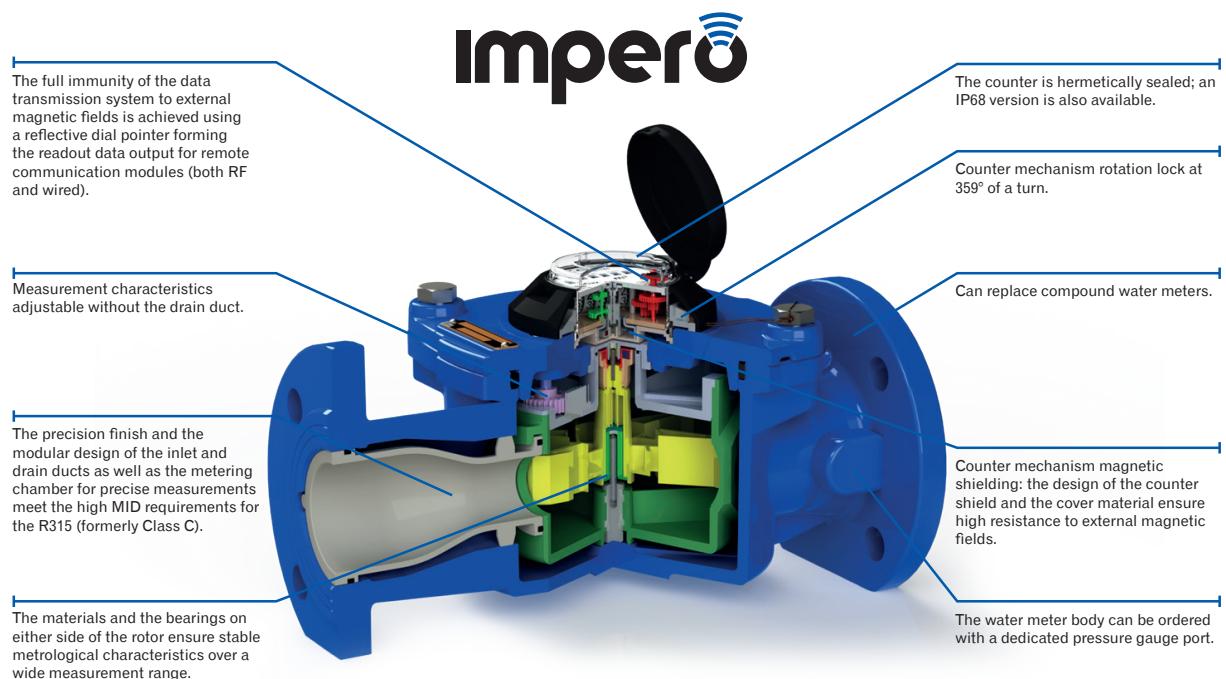

### APPLICATION

Cold water water supply systems (max. 30°C) and hot water supply systems (max. 50°C) in multifamily housing, industrial facilities, public facilities, and metering stations. Install the water meter horizontally (H) with the counter upright. The rotating counter of the water meter facilitates direct readings from the dial. As a measurement system component, the water meter helps determine the water consumption characteristics of buildings.

WATER  
METERING

## ADVANTAGES

## ADVANTAGES

### ECONOMIC:

- Precise measurements for R315 – H (formerly Class C)
- Low starting flow
- Protected by design from strong magnetic field interference, according to EN 14154
- U0D0: does not require straight upstream and downstream pipework runs
- May replace compound water meters (restrictions apply)

### CONVENIENT TO USE:

- Remote meter reading via a reed relay, optoelectronic pulse transmitter or M-Bus / pulse modules
- Easy to read: the angle of the counter, set in a shield with a cover, can be adjusted from 0° to 359°
- Hermetically sealed dial and barrel counter (IP68 version option)
- Output of events and alarms via optional data transmission modules: when equipped with an RF module, the water meter can indicate removal and interruption of the module, reverse flow, leaks, etc.

### RELIABILITY:

- Robust, tested design
- Long operating life thanks to advanced wear-resistant bearing and pivot materials
- Inlet duct and the metering chamber are both highly resistant to clogging with dirt
- The counter mechanism is shielded against mechanical damage

## KEY FEATURES

- MID-compliant EC type examination certificate
- Pre-equipped for AMR data communication modules
- Stable flow rate inlet duct design
- Double-sided rotor bearings
- Removable metering module
- Potable-water approved materials
- Electronic diagnostics for metrological parameters
- Rotor axis perpendicular to the duct
- Magnetic coupling

Standard version: the water meter is pre-equipped for RF, pulse and M-Bus modules

Pulse module  
AT-MBUS-NE-01

NKO version:  
NK and NO transmitters included

IP68 version:  
NK transmitter included

## REGULATORY AND STANDARD COMPLIANCE

- Directive 2014/32/EU of the European Parliament and of the Council of 26 February 2014 on the harmonisation of the laws of the Member States relating to the making available on the market of measuring instruments
- OIML R49:2004 & 2006 - Water meters intended for the metering of cold potable water and hot water
- PN-EN 14154:2005 - Water meters. Parts 1 to 3.
- PN-EN ISO 4064:2014-09 - Water meters for cold potable water and hot water. Parts 1 to 5.
- EC type examination certificate no. SK15-103 MI-001
- Classification of environmental, climatic and mechanical conditions: Class B (ref. PN-EN-ISO 4064-2:2014)
- Classification of mechanical environment conditions: Class M1 (ref. RMR of 02/06/2016)
- Classification of electromagnetic environment conditions: Class E1 (ref. RMR of 02/06/2016)

All materials used for the JS50-100 water meters have Hygiene Certificates for use with potable water

Table 1. SPECIFICATION

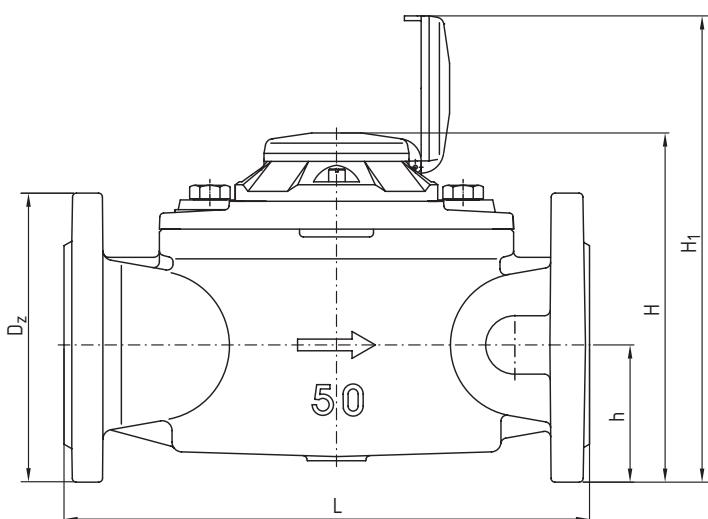

Parameter	JS Impero					
	JS50 JS50-XX*	JS65 JS65-XX*	JS80 JS80-XX*	JS100 JS100-XX*		
Nominal diameter	DN	mm	50	65	80	100
Permanent flow rate	$Q_3$	$m^3/h$	25	40	63	100
Overload flow rate	$Q_4$	$m^3/h$	31.25	50	78.75	125
Transitional flow rate	$Q_2$	$m^3/h$	0.127	0.203	0.32	0.508
Minimum flow rate	$Q_1$	$m^3/h$	0.079	0.127	0.2	0.317
Starting flow	–	$m^3/h$	0.025	0.04	0.04	0.07
Maximum instantaneous flow rate in case of fire < 2h	–	$m^3/h$	50	60	90	135
Measurement range, $R = Q_3 / Q_1$	–	–			315	
$Q_2 / Q_1$ factor	–	–			1.6	
Temperature class (rated operating temperature)	–	–		T30 (0.1-30°C) / T50 (0.1-50°C)		
Flow profile sensitivity class	–	–		U0, D0		
Indicating range	–	$m^3$			$10^6$	
Resolution of reading	–	$m^3$			0.0005	
Maximum allowable pressure	$P_{max}$	–		MAP16=(16 bar)		
Operating pressure range	–	bar		0.3 to 16		
Maximum pressure loss	$\Delta P$	kPa		$\Delta P63=(0.63$ bar)		
Operating orientation	–	–		H		
Advisable error: $Q_2 \leq Q \leq Q_4$	$\varepsilon$	%		$\pm 2$ for $\leq 30^\circ C$ cold water $\pm 3 > 30^\circ C$ water		
Advisable error: $Q_1 \leq Q < Q_2$	$\varepsilon$	%		$\pm 5$		
NK reed relay pulse transmitter	–	$dm^3/pulse$		1000 (standard pulsing) 2.5; 10; 25; 100; 250		
NO optoelectronic pulse transmitter	–	$dm^3/pulse$		1		
Height	h	mm	70.5	80.5	89.5	105
